Summary

Game Designer and Developer focused on creating engaging experiences with emotional and educational purpose. Proficient in Godot (GDScript) and end-to-end game design from concept to deployment across PC and mobile platforms. Creator of *Glitched Dungeon*, a Slay the Spire-inspired roguelike deckbuilder developed for Master's thesis research exploring programming logic education, motivation, and player emotion. Passionate about combining game mechanics with technology to craft meaningful interactive systems.

Technical Skills

- **Game Engines:** Godot (GDScript)
- **Programming Languages:** GDScript, Python, JavaScript, Java, SQL
- **Game Design:** Level design, gameplay mechanics, roguelike/deckbuilding design, player feedback, balancing, emotional design.
- **AI & Simulation:** Finite State Machines, Behavior Trees.
- **Tools & Workflow:** Git, Blender (basic modeling), GIMP (texturing), Visual Studio, Audacity (sound design).
- **Languages:** Italian (Native), English (Advanced/C2), Portuguese (Native).

Experience & Projects

Glitched Dungeon — iocandux.itch.io/glitched-dungeon

Lead Designer & Developer — 2026 – Present

- Designed and developed a multi-platform (Windows, Linux, Android) roguelike deckbuilder in Godot inspired by *Slay the Spire*.
- Implemented 3 full acts featuring enemy AI, deckbuilding systems, strategic rest sites, shops, and unique boss encounters.
- Embedded an educational core to teach programming logic concepts while evaluating player motivation and emotional response.

Universidade Estadual de Londrina — Londrina, PR, Brazil

Game Research Assistant — August 2025 – Present

- Researching AI integration and player emotion analysis in educational game environments.
- Prototyping adaptive difficulty systems using machine learning in Godot.
- Collaborating with education researchers to measure player engagement.

Universidade Estadual de Londrina — Londrina, PR, Brazil

Teaching Assistant - Computer Vision & Image Processing — November 2025

- Assisted students in implementing image processing algorithms relevant to game development.
- Developed Python exercises for texture analysis and object detection in game assets.
- Created teaching materials connecting computer vision to procedural generation.

GMTK Game Jam 2026 Participant — Online

Game Developer — July 2026

- Created "Ballin" within a 96-hour timeframe based on the "CountDown" theme.
- Designed and implemented time-pressure mechanics with audiovisual feedback.
- Successfully delivered a complete playable prototype.

HackathOrion 2025 Participant — Lages, SC, Brazil

Team Lead & Developer — May 2025

- Led a 6-person team in a 48-hour hackathon developing an automation solution.
- Presented the project to industry judges, demonstrating practical application.

Research Assistant — Lages, SC, Brazil

Research Assistant — July 2022 - December 2022

- Research: "Dinamizando a Aprendizagem de Programação de Computadores usando Desenvolvimento Orientado a Testes e problemas criados pelos próprios alunos".
- Solved code-related problems in Java, Python, and JavaScript.
- Assisted in front-end development using Vue.js.

Education

Universidade Estadual de Londrina — Londrina, PR, Brazil

Master of Science in Computer Science — August 2025 – Present

- Research focusing on programming logic education, player emotion, and motivation through original game prototypes (*Glitched Dungeon*).
- Developing AI-driven adaptive difficulty systems to evaluate player engagement and learning outcomes.
- Collaborating with educators to design mechanics that promote active learning.

Instituto Federal de Santa Catarina — Lages, SC, Brazil

Bachelor of Science in Computer Science — March 2021 – December 2024

- **Final Grade: 7.9/10.0** (Pass requirement: 6.0/10.0).
- Capstone Project: Developed an educational game platform using GDScript and Godot.
- Relevant coursework: Game Design Fundamentals, Graphics Programming, AI for Games, Human-Computer Interaction.
